SUMMARY OF 1967 SEASON

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

P R E F A C E

This new publication represents a combined summary of Florida, Alabama and North Carolina potato production, shipments, F.O.B. sales and distribution records for the 1967 potato season.

The Federal-State Market News Service began collecting shipping point information and issuing daily market reports for the 1967 potato season at Hastings, Florida May 8, Foley, Alabama May 6 and Elizabeth City, North Carolina June 19. This summary was prepared jointly by the Federal-State Market News Service's offices located at these reporting points.

Wm. E. Struck
Local Representative
Hastings, Florida

George D. Cammeyer
Local Representative
Foley, Alabama

Michael J. Shine
Local Representative
Elizabeth City, North Carolina

REVIEW OF THE 1967 HASTINGS, FLORIDA POTATO SEASON

William E. Struck - Local Representative

For several years weather has been the main factor in the Hastings potato deal. This year a late, severe freeze hit the crop. The February 28th freeze and subsequent drouth throughout the growing season coupled to render the poorest potato crop in many recent years. The Bunnel section, which is generally the earliest of the Hastings deal, was probably the hardest hit.

The freeze delayed the season by about three weeks but prolonged the season for only one week compared to last year. Light digging had started in most areas by the first of May. The early diggings were freeze damaged acreage and yields were light.

During May of the 1966 season, rain occurred all but two days of the month; during the 1967 season there were only two days of significant rain. These rains were spotty but helped sizing on some of the late potatoes.

Table stock offerings were very light and the bulk of the crop was sold to processors. In spite of the short crop, demand was only slow to fair during most of the season. When the first f.o.b. report was published for May 1st, the price was \$4.50 for 1 5/8" minimum Sebagoes to processors. The price dropped the next day to \$4.00 and held until the middle of the second week. The price then slowly declined for several days. Due to the freeze and delayed season, there was more than the usual competition from other areas. Bakersfield, California, published their first f.o.b. report on May 8th, which was only the second week of the Hastings deal. Foley, Alabama, published their first report May 16th. On May 22nd the Hastings f.o.b. was raised 25¢ per cwt to \$3.75 as supplies were limited in the Foley area by rain. After that date, the price declined steadily to \$2.50 on June 7th, the last day an f.o.b. was reported.

On June 7th, the last report, the Hastings, Florida, section carlot rail shipments totaled 2335. As of June 8th, 1571 trucks in carlot equivalents had been shipped from the Hastings area. This year only 74 cars were shipped from June 8th to June 20th, bringing the total to 2409 rail cars. An estimated 1500 acres of late plantings were expected to continue shipping very lightly late into June. Most growers were finished after the first week of June.

REVIEW OF THE 1967 FOLEY, ALABAMA POTATO SEASON

George D. Cammeyer - Local Representative

The 1967 South Alabama potato shipping season came to a virtual close in the week ending June 24. Very light offerings for shipment were expected in the next week or so.

Most growers and shippers were rather optimistic as the season opened, but the deal proved to be a disappointing one. Yields were lighter than expected, prices were never strong, and a good demand never developed.

This season's heaviest single day's shipments occurred on May 31, with a combined rail and truck total of 140 cars and carlots. During the peak period of shipments movement ranged from 100 to 125 cars and carlots daily. This compared with a high of 202 cars and carlots on June 9, 1966, and frequent daily shipments ranging from 150-200 cars and carlots in 1966, which was also considered a light season.

A few of the earliest round red potatoes shipped from Baldwin County this season sold for \$3.50 per cwt., f.o.b., but prices dropped to \$3.00 as soon as movement in volume developed. They reached a low of \$2.25 in early June, before the market showed some signs of regaining strength. In the last week of the deal, the price was back in the \$3.00 neighborhood, with a few sales as high as \$3.25. Round white types were as high as \$4.00 per cwt., f.o.b., in the early part of the deal, but prices generally were between \$2.50-2.75, in the peak of the season.

Earliest prospects indicated a rather light yield of good quality. Yields were even lighter than expected, however, and quality was impaired by a heavy infestation of tuber moth in many fields. Some were abandoned on this account. Alabama did ship potatoes with much more satisfactory maturity this year than has been the case in some recent years.

REVIEW OF THE 1967 FOLEY, ALABAMA POTATO SEASON
(Continued)

While the tuber moth undoubtedly affected Alabama's demand, competing areas also reported demand was poorer than usual. Some of this was probably attributable to a heavy carryover of storage potatoes in Maine and other important northern and western shipping areas. Prices of the winter storage potatoes were depressed for most of the season, and the availability of these potatoes at low prices undoubtedly had much to do with the poor shipping season in the south and west this spring.

REVIEW OF THE 1967 ELIZABETH CITY, NORTH CAROLINA POTATO SEASON

Michael J. Shine - Local Representative

Planted acreage for the 1967 North Carolina northeastern counties declined slightly according to the Statistical Reporting Service.

Due to early adverse weather conditions in Florida, the Hastings deal ran late into June. Baldwin County, Alabama, also continued with light shipments into the latter part of June. Dry weather during most of the growing season delayed digging, especially in the three northern counties. This did affect the early yields but beneficial rains helped later plantings somewhat. Eastern shore of Virginia also was delayed due to dry weather.

The three Northeastern North Carolina counties (Camden, Currituck, and Pasquotank) and Eastern Shore of Virginia have reactivated Marketing Order #953 of May, 1948. This marketing order has been inactive since 1951.

The price structure remained fairly steady with a more orderly movement in both North Carolina and Eastern Shore of Virginia. The opening f.o.b. price on June 20th was reported at \$2.25-2.50 and then dropping to mostly \$2.25 on the 22nd. The price remained steady at this level until July 10th. The price then jumped to \$2.75. On July 12th, the market rose to mostly \$2.75-3.00 with a mostly \$3.00 price on the 13th. Round Reds generally sold at 50-75¢ per cwt. higher which was somewhat higher than in previous years. Rain in the Sand Mountain area may have contributed to the higher spread on Round Reds.

Much of the movement in the southern areas as well as the early volume out of the three northern counties was on contracted sales. This type of sale has increased over the past few years. Although a factual percentage of these sales is not available, it is believed to be a large proportion of the total volume.

The packages used primarily for the fresh table trade were the 50 pound, 20 pound, and 10 pound sacks. Chipping stock was marketed in 100 pound burlap sacks with a notable movement in bulk loading.
